Two months after completion of Masters, in October 2014, I joined in IIT Kanpur under Assistant Professor Dr. Naren Naik, Department of Electrical Engineering as a Research Associate. Project titled Ã¢â‚¬Â"Science and technology of water harvesting and management in the medieval fort of Kalinjar in Central India (part of Ministry of Human Resource Development project- SandHI)Ã¢â‚¬Âwas entirely computational approach. It uses non linear microwave tomography to image the subsurface feature, for instance the underground water distribution in the fort. Microwave tomography uses electromagnetic waves of several Ghz to transmit practically through GPR, which when adding all the scattered waves in discontinuous media(material parameter under observation is dielectric constant, where any discontinuity can result in scattering), brings back an image of actual target. Its an approximated image, and we require to reduce the difference between the obtained approximated image and the actual target. Its an inverse problem. Our objective is to develop an algorithm by means of signal processing techniques, programming an FEM code in Matlab. It took me a little time to get a feeling of the domain. I thought I could able to produce a better result, but pointing my interest in antenna, Dr. Naren Naik gave me a work in understanding and obtaining a general expression for the antenna factor which would be useful for actual	0	TOTAL UG EXP= 0 ;TOTAL PG EXP= 0 ;TOTAL IND EXP= 11	9-Assistant Professor - Microwave Electronics [SC]-1 Vacancy in the Department of Electronics
